DAVIDE ARCOLINI

AI Engineer

(+39) 366 3241 024 • davidearcolini.dev@gmail.com • Torino (TO), Italy
LinkedIn GitHub davidearcolini.it

> AI Engineer specialized in multi-agent systems with a cybersecurity research background. I designed and deployed production-ready AI solutions combining LLMs, RAG, MCP integrations, and vector databases across enterprise environments. Experienced across the full AI lifecycle, from evaluation to security, observability, and optimization.

WORK EXPERIENCE

AI Engineer & IT Consultant Turin, Italy
Liquid Reply IT *Dec 2023 – Present*

- Designed and deployed production-ready multi-agent systems as OpenShift microservices using LangChain/LangGraph and DevSecOps practices. 10+ agents orchestration allowed users to perform root-cause analysis over heterogenous infrastructural data.
- Architected and implemented a multi-step agentic workflow to validate SQL release scripts across 500+ Oracle databases. Workflows pre-processed multi-file deployments (both apply and rollback) for syntax, best practices, impact, and index analysis, producing a report for DBAs.
- Built a RAG-based vulnerability classifier capable of analyzing, evaluating, and dispatching 10k+ vulnerabilities daily to the correct office.

Cybersecurity Research Intern Turin, Italy
Liquid Reply IT *Apr 2023 – Dec 2023*

- Researched and developed API security solutions using Kong API Gateway and the Microgateway architectural pattern, implementing authentication, logging, rate limiting, and API management with Spring Boot/Kotlin. Established CI/CD pipelines with Jenkins/GitHub Actions and deployed, tested, and monitored solutions on Kubernetes using Prometheus and Grafana.

EDUCATION

M.Sc in Computer Engineer - Cybersecurity Politecnico di Torino
GPA: 110/110 *Oct 2021 – Dec 2023*

- Competed in CyberChallenge.IT, ranking among the top 20 students in 2021. Lead the Challenge@PoliTo with Aruba S.p.A. developing passwordless access with FIDO2.0. 230+ hours teaching. Organized and presented tech events for the IEEE-HKN.

B.Sc in Computer Engineer Politecnico di Torino
GPA: 101/110 *Sep 2018 – Jun 2021*

- Worked on a short thesis project named "PRNGs based on Logistic Chaotic Maps and Generalized Lorentz Systems".

TECHNICAL SKILLS

Python, LangChain, LangGraph, OpenAI API, Docker, Kubernetes, OpenShift, MCP, Dynatrace, Oracle Databases
